

Full height panel windows

Feather edged boards

French doors

Secret storage space

Standard window

Sloping roof

Horizontal cedar

Full height panel window

Charcoal grey uVPC French doors

Double pitched roof

Secret storage space

Narrow full height glass panel window

French doors

Disguised wedge shaped roof - Whilst the roof appears flat, due to the horizontal cedar around it, it is in fact sloped to the far end of the building so that the rain water is controlled at the edge of the boundary. It would have been a problem had the roof sloped from front to back as the water would have been discharged against the wall and space was limited for a gutter, therefore we did not make the roof slope as we normally do.

Corner post design helps to give the maximum amount of light

Two step decking

Single uPVC door in charcoal grey

Four full height glass panel windows

Disguised wedge shaped roof - Whilst the roof appears flat, due to the horizontal cedar around it, it is in fact sloped to the far end of the building so that the rain water is controlled at the edge of the boundary. It would have been a problem had the roof sloped from front to back as the water would have been discharged against the wall and space was limited for a gutter, therefore we did not make the roof slope as we normally do.

White uPVC French doors and panel windows

Vertical cedar cladding
